

Qualitative Water Treatment

Glass bottles by Fill-me®

Glass: borosilicate
Lid: synthetic material (food quality standard FDA, compliant with EU standard, free of Phthalate)
Seal: silicone (food quality standard FDA, compliant with EU standard, free of Phthalate)
Strap: stainless steel

You can order the bottles from **Kuboid** and they can be sent to you along with the **RHYTHMIXX®**. The come as 0,5 liter and 1 liter bottles.

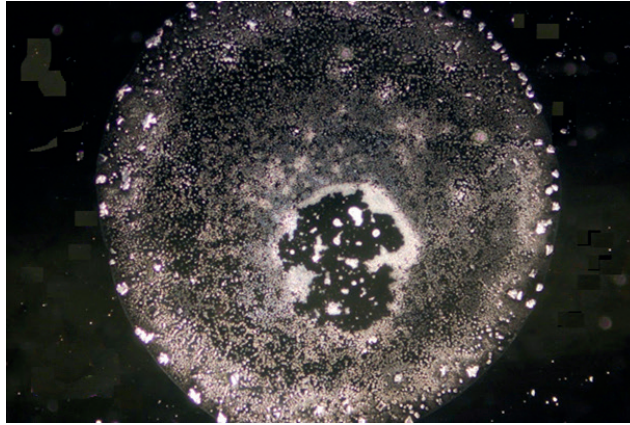

- **How do I rhythmize?** Compared to a stirrer or mixer the **RHYTHMIXX®** moves in a 4:1 rhythm. Due to its oscillating motion the **RHYTHMIXX®** needs a stable surface and a good working height, so that a good freedom of movement for the crank is guaranteed. The **RHYTHMIXX®** should be located in a place, which is as free as possible from electro-magnetic fields and not illuminated by LED light.
- **Rhythm:** It is important how the hand crank of the **RHYTHMIXX®** is moved. We have found out that 72 rotations per minute is an ideal measure and speed. The rhythm of 72 rotations per minute with the crank corresponds in the field of music to an andante. It is comparable to a rapid advance. A positive emotional or mental impulse during the crank movement will show its effect on the water. One turn of the crank corresponds to a reversal of the cube, from whose motion geometry the Rhythmixx® originates.
- **Duration of treatment:** ideally 30 seconds with 36 rotations, an increased effect at 60/72 and 120/144.
- **Level of filling of the bottle or container:** 3/4 to 4/5 full.
- **Efficacy on the water:** up to 24 hours, after which it fades slightly. Please use a bottle or container with as much glass or ceramic as possible. Plastic reduces the water quality. Therefore no PET, aluminium or similar materials.
We recommend to use glass bottles such as the one by **Fill-Me®** (see image).

In addition to the improvement of taste and the experience that the water has a much more invigorating effect than untreated drinking water, long-term experiences in well-being may also be noticeable, such as better digestion and overall lighter feeling.

We have examined the water using different qualitative methods of investigation. The result of one of these methods is the pictures of spagyrically treated water and the resulting crystalline analysis by the Lake Constance water laboratory of Dr. Wilhelm Höfer.

Picture credits of neutral water versus rhythmized water samples

20-fold magnification of the neutral sample.
 The water droplet has a diameter of 3 mm.

"The tap water in Bambergen/Überlingen shows a good centricity. All areas, except the center, have an unstructured diffuse turbidity and do not show an own structure. Missing in the center is often a crystallization, resulting in a weakness of the water structure in relation to the metabolic system of a consumer."

The details spagyric method are written down in the book **"Phönix aus der Asche"** by Dr. Wilhelm Höfer. We are happy to send you an excerpt from the book about the method of crystallization analysis of foods.

20-fold enlargement after treatment with the **RHYTHMIXX®**, 36 rotations.

100-fold enlargement of the center of the picture of rhythmized water.

"Six-star shapes are particularly valuable. Remarkable are the star rays branching into the finest forms."
 (Quotes from the research results of Dr. Wilhelm Höfer)
